

Michael Kelso Glass

Senior Application Developer / UX-Focused Systems Builder
Front-End Modernization | Internal Tools | Workflow Systems | Portland-bound

Professional Summary

Tool-agnostic application developer with extensive experience modernizing internal systems, improving operational workflows, and building front-end experiences that make complex applications easier to understand, support, and use.

Background spans government, consulting, publishing, enterprise systems, technical writing, and application architecture, with a consistent focus on usability, maintainability, troubleshooting, and rapid adaptation to unfamiliar technologies.

Experienced in front-end modernization, ASP.NET/C# development, workflow systems, SQL Server applications, performance optimization, AI-assisted learning and development workflows, and long-term operational support for internal business applications.

Professional Experience

Contra Costa County EHSD

Information Systems Programmer / Analyst IV

November 2012 – Present

Administrative Department, Application Development

Highest-level role in the ISPA classification, focused on application development, front-end modernization, internal systems, workflow tools, and long-term support for county operational applications.

Key Projects

Workload Distribution Tool (WDT)

Took over development and support for a critical workload distribution system after the original vendor was removed midway through the project.

- Supported approximately 1,000 eligibility and social work staff
- Developed workload distribution logic based on operational constraints, availability, specialization, and bilingual capabilities
- Optimized Oracle-backed data access and reduced some queries from minutes/hour-scale delays to seconds
- Maintained long-term production stability with very low defect rates

STARS.NEXT

Contributing front-end UX modernization work for a next-generation knowledge management platform intended to support county-wide employee information retrieval and operational workflows.

- Azure-oriented .NET MVC modernization initiative
- Front-end UX and standards development
- Reusable UI patterns and maintainability planning
- AI-assisted knowledge management direction

CFS Wraparound System

Architected and developed an internal application used to track services and payments connected to foster care and child welfare programs.

- Supported operational workflows tied to thousands of children receiving county services
- Handled requirements, database design, architecture, development, testing, and support

Trust Fund Management System

Designed and developed an internal financial tracking system for managing trust fund allocations for children under county care.

- Tracked individual balances, entitlements, interest, and related activity
 - Improved operational visibility and reduced manual tracking complexity
-

Earlier Career Highlights

Robert Half Technology / Consulting

Software Architect / Consultant

March 2008 – October 2012, various consulting roles

Designed and developed web applications for public-sector, nonprofit, and private clients using ASP.NET, C#, VB.NET, PHP, SQL Server, JavaScript, HTML/CSS, and related web technologies.

Corp of Enabled Veterans

Lead Software Architect

April 2010 – August 2012

Led architecture and development for web-based and Windows applications, including requirements gathering, implementation, testing, documentation, maintenance, and change management.

Disabled American Veterans

Software Engineer II

July 2008 – April 2010

Developed and maintained internal fundraising applications using ASP.NET/VB and Oracle-backed systems.

Fifth Third Bank

Senior Data Architect / Release Manager

July 2004 – June 2007

Managed builds, releases, deployment coordination, ClearCase/ClearQuest release packages, implementation planning, and business continuity/disaster recovery planning for core banking applications.

Reach Publishing

Director, Software Development

January 2001 – December 2002

Managed and developed internal sales, HR, CRM, and order-entry systems. Led the transition away from Lotus Notes-based applications toward PHP/MySQL web applications.

Whittman-Hart / MarchFirst

Senior Consultant

January 1999 – July 2001

Worked on enterprise and startup web applications, including PlanetFeedback.com using Vignette StoryServer/Tcl, and Lotus/Domino-based applications for corporate clients.

Synergistics

Lead Developer / Knowledge Management Architect

August 1997 – December 1998

Led development and architecture for a Knowledge Management product during the early KM wave in the Lotus/Domino ecosystem.

Miller Heiman

IT Manager

April 1995 – July 1997

Supported network and internal systems and began the transition into software development by creating Lotus Notes-based versions of Strategic Selling and Conceptual Selling tools.

Technical Skills

Languages & Platforms: ASP.NET / C#, HTML, CSS, JavaScript, SQL Server, PHP, MySQL, VB.NET

Current / Recent Focus: ServiceNow Portal, Azure-oriented .NET MVC applications, UX modernization, AI-assisted workflows, reusable front-end standards

Additional Background: Oracle-backed systems, Lotus Notes/Domino, Vignette StoryServer/Tcl, ClearCase/ClearQuest, Visual Basic, MS Access modernization

Focus Areas: Internal tools, workflow systems, front-end usability, legacy modernization, performance optimization, application architecture, technical writing

Selected Technical Publishing

Lead author and developer for:

- *Beginning PHP, MySQL, and Apache Web Development*
- *Beginning PHP5, MySQL, and Apache Web Development*

Wrote and developed practical examples covering database design, content management, email workflows, mailing lists, message boards, error handling, and maintainable PHP/MySQL web applications.

Writing, Teaching & Knowledge Sharing

Longtime technical mentor, pool instructor, and collaborative problem-solver with a strong interest in helping people understand systems and workflows more clearly.

Military Service

U.S. Navy — Machinist's Mate Second Class
August 1985 – October 1993

Served aboard USS Carl Vinson and USS Sacramento, including service during Operation Desert Shield and Operation Desert Storm. Built a Quattro Pro-based tool aboard USS Sacramento that reduced fuel calculation turnaround time from roughly six hours to as little as 15 minutes.
